

Nick Doe, *Commons meter decision smart choice*, Flying Shingle, p.6, January 6, 2014.

Dear Editor

We should be pleased that the Commons made the sensible decision to install smart meters. Not only does this avoid wasting donors' money for no good reason, it will permit them to install alternative energy sources and match their electrical energy supply with their demand. They will be able to do this by selling surplus, and buying shortfalls, through their smart meters, thus obviating the need to install banks of distinctly environmentally-unfriendly lead-acid batteries.

Good choice, Commons.

Sincerely
